Exercises in electrical magnetic measurement

By Richard Evan Day

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 edition. Excerpt: . . . the deflections 280 20 and 210 respectively. If on another occasion a current of a certain strength produce a deflection of 370 in the galvanometer A, what deflection would the same current have produced in B When a tangent galvanometer is inserted in a circuit with the plane of its coil coinciding with that of the magnetic meridian, a current of strength, c , will produce a deflection, θ , the two being connected by the equation $c m \tan \theta$, where m is a constant whose numerical value depends upon the construction of the particular instrument and upon the intensity of the local magnetic field. Let m_1 and m_2 be the values of the constant m for the two galvanometers A and B; then from the first experiment we have $m_1 \tan \theta_1 = m_2 \tan \theta_2$. $i \tan \theta_1 = m_2 \tan \theta_2$ V...
