Reviews

These kinds of ebook is almost everything and got me to searching forward and a lot more. It usually does not price excessive. Its been written in an exceedingly basic way and is particularly only following i finished reading through this pdf through which in fact modified me, alter the way i really believe.

A BIOANALYTICAL STUDY ON HEAVY METAL HYPERACCUMULATION IN PLANTS

LAP LAMBERT Academic Publishing. Paperback. Book Condition: New. Paperback. 172 pages. Dimensions: 8.7in. x 5.9in. x 0.4in. Environmental pollution is a continuing global problem. Toxic heavy metals contribute to a great proportion of soil and water pollution and causes problems to human beings, animals and to plants. It is becoming a critical concern and needs rapid and effective remediation. The conventional remediation methods are no longer economically valid and practical for environmental cleanup, therefore, they have to be replaced with an advanced and modern technology and that is: using plants, which is referred to as phytoremediation. This method is environmentally friendly, aesthetically pleasing, potentially cheap and offers the possibility of bio-recovery of heavy metals. This book describes a recent study focusing on arsenic and lead pollution and the prospect of remediation by using certain plants that are capable of accumulating extraordinary high amounts of heavy metals. Unfortunately the biochemical and physiological mechanisms responsible for this phenomenon are still not completely understood. Therefore, investigation on the involvement of the plants proteome in metal accumulation, stress, and tolerance offers a new platform to understand the responsible biochemical and physiological mechanisms. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
