In a majority of the groves the trees are set out 25 feet apart, making about 70 trees to the acre. One advantage of this system is that pineapples may be planted between the rows for the first two or three years. The principal drawbacks with which the orange growers here have-to contend are the wind, scale and ants; the former may be overcome by a wind-break, and the scale and ants can be kept within bounds by constant spraying and washing. The Porto Rico citrus fruit proposition is an enticing one and there is apparently little risk in the venture. It does not require a large capital, as nursery trees of all kinds can be bought in Porto Rico at \$25.00 a hundred; land, according to location, from \$20.00 to \$100.00 per acre, and unlimited labour can be secured at from 30 to 50...
